Library Management Console

System Requirements Specification

1 PROJECT ABSTRACT

Library Management Console Application is a pure java application with Java collection, where it allows managing the books in the library. The Library Management System empowers users to perform Create, Read, Update operations on books. Users can create new book entries, update existing book and subject information and many more relevant operations.

2 BUSINESS REQUIREMENTS:

Screen Name	Console input screen
Problem Statement	<ol style="list-style-type: none">1. User needs to enter into the application.2. The user should be able to do the particular operations3. The console should display the menu<ol style="list-style-type: none">1) Add Book2) Get Book by Name3) Check Availability4) Update Book5) Get All Books6) Exit

2.1 LibraryManagementApp Class - Method Descriptions

Method	Task	Implementation Details	Return Value
main(String[] args)	Entry point for the application	<ul style="list-style-type: none"> - Initialize Scanner and Inventory: Create instances of Scanner and Inventory. - Display Menu: Show the console menu with options for adding, updating, viewing, and issuing books, etc. - Handle User Input: Use switch to call corresponding methods based on user choice. - Exit Option: If the user selects "Exit" option, close Scanner and terminate the program. 	<p>Returns: void (Runs indefinitely until user selects exit).</p> <p>Example Output:</p> <p>Options:</p> <ol style="list-style-type: none"> 1. Add Book 2. Get Book by Name 3. Check Availability 4. Update Book 5. Get All Books 6. Exit <p>Enter your choice:</p>
addBook(Inventory inventory)	Add a new book to the inventory	<ul style="list-style-type: none"> - Prompt for Details: Ask for ISBN, Title, Author, and Publisher. - Create Book Object: Create a Book object with the provided details and set available = true. - Call Inventory Method: Call inventory.addBook(new Book). Handle ISBNAlreadyExistsException if thrown. 	<p>Returns: void (Prints success message or exception message).</p> <p>Exception: ISBNAlreadyExistsException exception should be caught and it should print a message as: "Error: " + e.getMessage().</p> <p>Example Output:</p> <p>"Book added successfully."</p> <p>or</p> <p>"Error: Book with the same ISBN already exists."</p>

getBookByName(Inventor y inventory)	Search for a book by name	<ul style="list-style-type: none"> - Prompt for Book Name: Ask the user to enter the book's name. - Call Inventory Method: Call <code>inventory.getBookByName(name)</code>, which returns an <code>Optional<Book></code>. - Handle Optional: If present, display book details including Title, Author, Publisher, ISBN, and Status. - Status Check: If <code>book.isAvailable()</code> is <code>true</code>, print "Status: Available", otherwise print "Status: Issued" along with <code>Issued Date</code> and <code>Due Date</code>. - Book Not Found: If <code>Optional</code> is empty, print "Book not found." 	<p>Returns: <code>void</code> (Displays book details or not found message).</p> <p>Example Output:</p> <p>If the book is available:</p> <p>Book found: Title: Java Programming Author: John Doe Publisher: Pearson</p> <p>ISBN: 123456789 Status: Available</p> <p>If the book is issued:</p> <p>Book found: Title: Java Programming Author: John Doe Publisher: Pearson</p> <p>ISBN: 123456789 Status: Issued Issued Date: 2024-03-01</p> <p>Due Date: 2024-03-15</p> <p>If not found: "Book not found."</p>
checkAvailability(Inventor y inventory)	Check if a book is available	<ul style="list-style-type: none"> - Prompt for ISBN: Ask the user to enter the ISBN of the book. - Call Inventory Method: Call <code>inventory.isBookAvailable(isbn)</code> to check availability. 	<p>Returns: <code>void</code> (Displays availability status).</p> <p>Example Output:</p> <p>"The book with ISBN [isbn] is available."</p> <p>If not available:</p>

		<p>- Display Result: Print whether the book is available or not.</p>	<p>"The book with ISBN [isbn] is not available."</p>
<p>updateBook(Inven tory inventory)</p>	<p>Update details of an existing book</p>	<p>- Prompt for ISBN: Ask for the ISBN of the book to update.</p> <p>- Find Book: Find the book by ISBN.</p> <p>- Check Existence: If no book is found, print "No book found with ISBN [isbn]."</p> <p>- Prompt for Updates: Ask for updated Title, Author, and Publisher.</p> <p>- Update Book: Call <code>inventory.updateBook(updatedBook)</code>.</p> <p>- Display Success Message: Print "Book updated successfully."</p>	<p>Returns: <code>void</code> (Updates the book).</p> <p>Example Output:</p> <p>"Book updated successfully."</p> <p>If not found:</p> <p>"No book found with ISBN [isbn]."</p>
<p>getAllBooks(Inven tory inventory)</p>	<p>Display all books in the inventory</p>	<p>- Call Inventory Method: Call <code>inventory.getAllBooks()</code> to retrieve a list of all books.</p> <p>- Check List: If the list is empty, print "No books available."</p> <p>- Display Books: Loop through the list and print details of each book.</p>	<p>Returns: <code>void</code> (Prints all books or empty message).</p> <p>Example Output:</p> <p>All Books: Title: Java Programming ISBN: 123456789 Author: John Doe Publisher: Pearson Available: Yes</p> <p>If no books:</p> <p>"No books available."</p>

2.2 Inventory Class - Method Descriptions

Method	Task	Implementation Details	Return Value
addBook(Book book)	Add a new book to the inventory	<ul style="list-style-type: none">- Check for Existing ISBN: Check if a book with the same ISBN already exists or not.- Throw Exception: If ISBN already exists, throw <code>ISBNAlreadyExistsException</code> with the message: "Book with the same ISBN already exists."- Add to List: If the ISBN is unique, add the <code>Book</code> object to the <code>books</code> list.	<p>Returns: <code>void</code> (Adds the book to inventory or throws exception).</p> <p>Throw Exception: <code>ISBNAlreadyExistsException</code> exception should be thrown if the ISBN already exists with the message: "Book with the same ISBN already exists."</p>
getBookByName(String name)	Retrieve a book by its name	<ul style="list-style-type: none">- Search by Name: Find a <code>Book</code> where the title contains the given <code>name</code> in parameter(case-insensitive).- Return as Optional: Return the result wrapped in an <code>Optional<Book></code>.	<p>Returns: <code>Optional<Book></code></p>
updateBook(Book updatedBook)	Update details of an existing book	<ul style="list-style-type: none">- Find Book by ISBN: Find a book with the same ISBN fetched from a passed <code>Book</code> object in parameter.- Update Details: If found, update <code>title</code>, <code>author</code>, <code>publisher</code>, <code>available</code>, <code>issuedDate</code>, <code>dueDate</code>, and <code>username</code> fields.- Return Updated Book: Return the updated <code>Book</code> object.- Handle Absence: If no book is found with the ISBN, return <code>null</code>.	<p>Returns: <code>Book</code> (Updated book details).</p> <p>Returns: <code>null</code> if no book is found with the given ISBN.</p>

getAllBooks()	Retrieve all books in the inventory	- Return List: Return the books list containing all Book objects.	Returns: List<Book> (All books in the inventory).
isBookAvailable(String isbn)	Check availability of a book	- Check Availability: Check if any Book has the given ISBN and is marked as available . - Return Result: Return true if the book is available, otherwise return false .	Returns: boolean (true if available, false if not).

3 CONSTRAINTS

3.1 BOOK CONSTRAINTS

- When adding a book with an ISBN that already exists in the inventory, the method should throw an **ISBNAlreadyExistsException** with the message:
 “Book with the same ISBN already exists.”
- When trying to fetch a book by name that does not exist in the inventory, the method should return an empty **Optional<Book>**.
- When trying to update a book that does not exist in the inventory, the method should return **null**.

4 TEMPLATE CODE STRUCTURE

4.1 PACKAGE: COM.ELIBRARY

Resources

Class/Interface	Description	Status
LibraryManagementApp.java(class)	This represents bootstrap class i.e class with Main method, that shall contain all console interaction with the user.	Partially implemented

4.2 PACKAGE: COM.IIHT.TRAINING.ELIBRARY.MODEL

Resources

Class/Interface	Description	Status
Book (class)	<ul style="list-style-type: none">This class contains all the properties of the Book class.	Already implemented.

4.3 PACKAGE: COM.IIHT.TRAINING.ELIBRARY.INVENTORY

Resources

Class/Interface	Description	Status
Inventory (class)	<ul style="list-style-type: none">This class contains all the methods which are used to write the business logic for the applicationYou can create any number of private methods in the class	Partially implemented.

4.4 PACKAGE: COM.IIHT.TRAINING.ELIBRARY.EXCEPTION

Resources

Class/Interface	Description	Status
ISBNAlreadyExistsException (Class)	<ul style="list-style-type: none">Custom Exception to be thrown when trying to add a book for which ISBN is already exists	Already created.
AlreadyIssuedException (Class)	<ul style="list-style-type: none">Custom Exception to be thrown when trying to issue a book which is already issued.	Already created.

5 EXECUTION STEPS TO FOLLOW

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers need to go to the Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal.
3. This editor Auto Saves the code.
4. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
5. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
6. To run your project use command:
`mvn clean install exec:java -Dexec.mainClass="com.elibrary.LibraryManagementApp"`
7. To test your project, use the command
`mvn test`
8. You need to use CTRL+Shift+B - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
